Sparkling
Water
Machine[™]

User Manual

Please Read Before Use

Thank you

*for purchasing a **SodaKING Sparkling Water Machine** and supporting an Australian-owned company!*

Please take a minute to read through these instructions to get the most from your **Sparkling Water Machine**.

IMPORTANT

- Only rinse bottles in cold soapy water
- Do not wash bottles in dishwasher
- Do not freeze bottles
- **Only carbonate water** - add flavours later
- For best results chill water first

We have a range of flavours available to turn your sparkling water into delicious soft drink.

Replacement CO2 Cylinders are available at 1,200+ locations throughout Australia.

Visit **sodaking.com.au** for your nearest exchange location.

ENJOY!

Instructions

Here's a quick guide to making the perfect sparkling water.

1. Fill the **SodaKING** reusable bottle with chilled water to the fill-line, located approximately 5cm down from the neck of the bottle. Chilled water works best, as carbonation is more efficient when the water is cold.

HINT: Keeping a reusable SodaKING bottle full of water in the fridge means you will always have cold water ready.

Do not place bottle in the freezer.

2. Screw the reusable bottle into your **SodaKING Sparkling Water Machine** firmly.

3. Press the carbonation button once **FIRMLY** for about 1 second only, then wait 3-5 seconds. If you prefer your water to be *bubblier*, repeat this process until the desired level of carbonation has been reached. You may hear the 'whoosh' of the pressure release valve. This is a normal part of the machine's operation.

4. When you are happy with level of carbonation, tilt the bottle forward to release the pressure. You will hear the pressure release. Wait a further 3-5 seconds before removing the reusable bottle from the **SodaKING Sparkling Water Machine**.

5. It's time to enjoy your sparkling water, or *gently* add flavours or fruit to your sparkling water.

Please be aware that your **SodaKING Sparkling Water Machine** is *only to carbonate water*. All fruit, flavours and any other products must be added **AFTER** you have carbonated your water.

If you carbonate any liquid other than water your warranty will be void.

When your gas cylinder is empty, refer to **sodaking.com.au** for your nearest exchange location.

"What's the little black ring?", you ask. Every **SodaKING Sparkling Water Machine** comes with a rubber ring already in place that seals the surface between the cylinder and the machine. We provide a spare in the event yours becomes damaged or is missing.

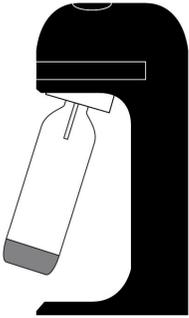

Never wash your reusable bottle with hot water or put it in the dishwasher. To clean just rinse with lukewarm or cold soapy water.

Having a problem?

Don't waste your precious time returning to the store you bought your machine from. Just give us a call on **(03) 9081 7600** or email us at **support@sodaking.com.au**.

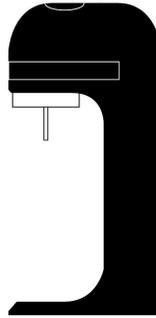

Customer service is a high priority at **SodaKING**, so give us a call or email and we'll help you.

SPARK™ / CLASSIC™ Setup Instructions

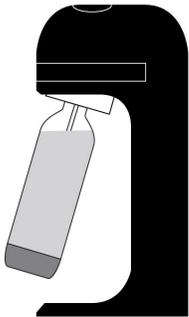

1

Pull the base of the bottle forward and unscrew to remove it from the Sparkling Water Machine. Fill the bottle with tap water to the indicator line approx 5cm from the neck of the bottle and place in the fridge to chill.

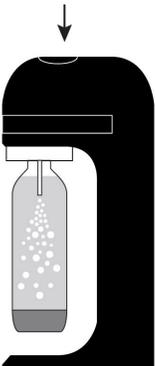

2

Remove the seal and cap from the top of the CO2 Cylinder and slide it up through the base of the Sparkling Water Machine and firmly screw it up into the thread at the top.

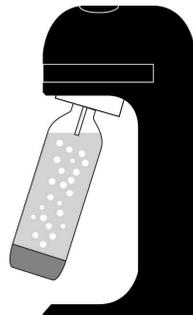

3

With the CO2 injector pointing forward, screw your chilled bottle in until it is firm. Then push the base of the bottle gently forward until it is in the upright position.

4

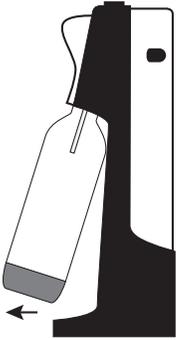

Press down on the carbonation button firmly for 1 second only then wait a couple of seconds and repeat this process if required. You may hear the 'whoosh' of the pressure release valve. This is normal.

5

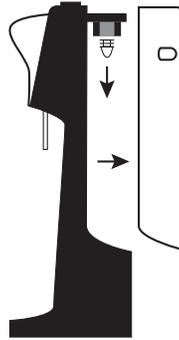

Finally, gently pull the bottom of the bottle forward. You will hear the remaining CO2 escape from the bottle. Unscrew the bottle. You are now ready to add your flavour or just enjoy straight!

ADVENTURER™ Setup Instructions

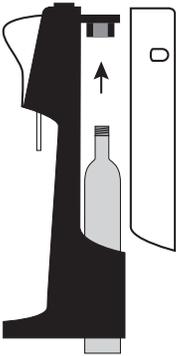

1

Depress and hold the top front panel while unscrewing the bottle from the Sparkling Water Machine. Fill the bottle with tap water to the indicator line and place in the fridge to chill.

2

Depress the two buttons on either side of the rear cover and pull the cover away from the Sparkling Water Machine. Pull down on the small white transit plug and discard.

3

Remove the seal and cap from the top of the CO2 Cylinder and slide it up through the base of the Sparkling Water Machine and firmly screw it up into the thread at the top.

4

Replace the rear cover. Now push and hold the front panel so the CO2 injector is pointing forward and screw your chilled bottle in until it is nice and tight. Now release the top front panel.

5

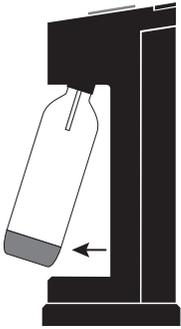

Press down on the carbonation button firmly for 1 second only then wait a couple of seconds and repeat this process if required. You may hear the 'whoosh' of the pressure release valve. This is normal.

6

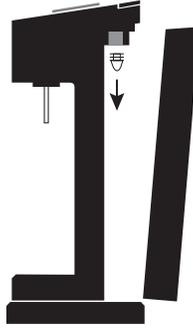

Finally, push the front panel in while pulling the base of the bottle forward. You will hear the remaining CO2 escape from the bottle. Unscrew the bottle. You are now ready to add your flavour or just enjoy straight!

WINDSOR™ Setup Instructions

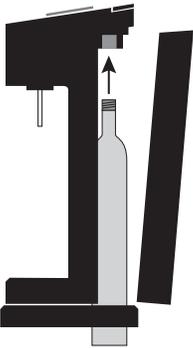

1

Pull the base of the bottle forward and unscrew to remove from the Sparkling Water Machine. Fill the bottle with tap water to the indicator line and place in the fridge to chill.

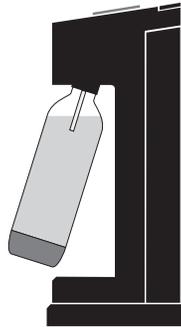

2

Depress the top button at the rear and pull the cover away from the Sparkling Water Machine. Pull down on the small white transit plug and discard.

3

Remove the seal and cap from the top of the CO2 Cylinder and slide it up through the base of the Sparkling Water Machine and firmly screw it up into the thread at the top.

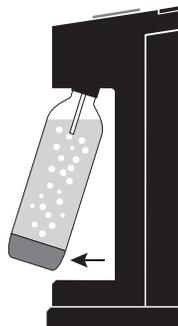

4

Replace the rear cover so it locks onto the Sparkling Water Machine. With the CO2 injector pointing forward, screw your chilled bottle in until it's nice and tight. Push base of bottle in until bottle is upright.

5

Press down on the carbonation button firmly for 1 second only then wait a couple of seconds and repeat this process if required. You may hear the 'whoosh' of the pressure release valve. This is normal.

6

Finally, gently pull the bottom of the bottle forward. You will hear the remaining CO2 escape from the bottle. Unscrew the bottle. You are now ready to add your flavour or just enjoy straight!
